

Campbell Run Road / Permanent Section Closer

In 2020, Campbell Run Road became part of a 2 year dirt and gravel project which included a number of cross pipes as well as a major stabilization attempt of a portion toward the Tiadaghton end. With the large snow storm in December of 2020, followed by a massive amount of rain, it became apparent that stabilizing that section would cost much more than the Dirt & Gravel Project would allow - and with most certainty not hold for any length of time. After much consideration, it was decided to permanently close this section just prior to the affected area through to Tiadaghton Hill Road. (see map below)

Temporary barriers will be placed on Friday, July 2nd which will be replaced with permanent earth barriers. Each end will provide an ample culdesac area which will also allow for foot access to state land. The area of road between the barriers will be reclaimed to a natural state.

The Dirt & Gravel project will continue on the remaining open section of Campbell Run Road out to Kennedyville Road, with added detail taken to the more stressed areas of the road than had been previously planned.
